Adobe Photoshop CC Introduction Training (1 Day)

The course equips students with foundational skills in Adobe Photoshop, focusing on managing photographic images and utilizing Photoshop tools efficiently. Students will learn to navigate Adobe Photoshop and Adobe Bridge for asset organization and workspace customization. The course covers the creation of basic images, applying design principles, and working with digital devices. It also delves into managing selections and layers, modifying and repairing images, and implementing color management. Advanced skills taught include refining images through layer adjustments, using camera raw, and applying advanced image refinement techniques. Additionally, the course addresses the workflow of managing files, including importing, exporting, organizing, and saving files for web and print.

Target students include professional or amateur photographers who want to use the robust features of Photoshop to enhance, modify, and organize their photographs, and anyone interested in working toward the Visual Design Using Adobe Photoshop certification.
